Honeywell Lumilux[®] Industrial Pigments

Product Line Overview

Honeywell Lumilux[®] Industrial Pigments

For more than 40 years, Honeywell's line of Lumilux[®] industrial luminescent pigments have been used in some of the world's leading consumer and industrial products. These pigments are formulated to meet the brightness and consistency standards required of many safety and automatic process equipment manufacturers. With one of the world's broadest lines of luminescent pigments, Honeywell offers its phosphorescent and fluorescent products in a variety of delivery forms to suit virtually any application, including:

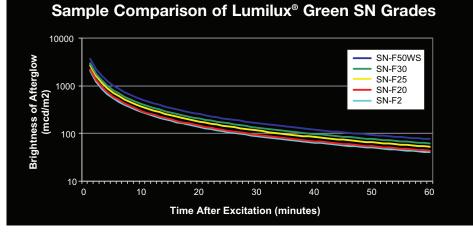

- Safety signage
- Paints and coatings
- Automatic sorting processes
- Instrument panels and dashboards for automobiles and aircraft
- Watch dials
- Injection-molded toys and novelty items

Phosphorescent Pigments

Known for their glow-in-the-dark properties, these pigments store energy when exposed to the sun or an artificial light source, and emit light long after the source has been removed. Honeywell offers phosphorescent products with two different

chemistries designed to meet UL and CE safety standards:

- Lumilux N: Zinc sulfide-based products
- Lumilux SN: Strontium aluminatebased products, which feature significantly higher initial brightness and longer afterglow periods than zinc sulfide-based products

Fluorescent Pigments

Designed for automatic processes that require bright, fade-resistant ultraviolet fluorescent printing inks, such as mail sorting or manufacturing lines, Honeywell Lumilux fluorescent pigments provide a high level of signal strength. Each pigment is specifically produced to provide excellent batchto-batch consistency, which helps to ensure signal strength is constant across all materials using the pigment.

Technical Expertise

Whether you are looking for a specific grain size, or to increase the signal strength of a pigment, Honeywell can
