

Boron Trifluoride Equipment and System Audit

Honeywell is dedicated to the safe production and transportation of Boron Trifluoride (BF_3). We collaborate with our customers to ensure that BF_3 delivery equipment is safe and reliable.

Honeywell
THE POWER OF CONNECTED

A Mutual Evaluation of BF₃ Offloading Procedures

A BF₃ offloading audit is a mutual, on-site process check of Honeywell and customer equipment to identify improvement opportunities and to eliminate any potential safety issues. Prior to the audit, our customer's offloading SOPs are reviewed for compatibility with our guidelines.

Utilizing a comprehensive checklist, we will collaborate with you to perform a feed system audit. This audit includes:

- A review of Honeywell's trailer and equipment
- A review of your connection equipment
- An evaluation of your mitigation system
- Sharing of best practices

A post-audit debrief is held with you to review any observations/findings and agree on improvement opportunities.

A post-event formal report is provided.
